Score_processor.py

```
ore_processor.py > ScoreProcessor > process_score_file
class ScoreProcessor:

    def process_score_file(self, file_path: str) -> int:
        try:
            # Open and read file
            with open(file_path, "r") as file:
                data = file.read().strip()

            # Convert text to integer
            score = int(data)

        except FileNotFoundError:
            print("Error: File not found.")
            raise

        except ValueError:
            print("Error: Invalid data format. File must contain a number.")
            raise

        else:
            print("Data processed successfully")
            return score * 10

        finally:
            print("File cleanup completed")]
```

Test_score_processor.py

```
test_score_processor.py > test_missing_file
1 import pytest
2 from score_processor import ScoreProcessor
3
4
5 # Test for successful calculation
6 def test_valid_score_file(tmp_path):
7
8     # Create a temporary file with valid number
9     file = tmp_path / "score.txt"
10    file.write_text("5")
11
12    processor = ScoreProcessor(
13        Loading...
14    )
15    result = processor.process_score_file(str(file))
16    assert result == 50
17
18
19 # Test for missing file
20 def test_missing_file():
21
22    processor = ScoreProcessor()
23
24    with pytest.raises(FileNotFoundError):
25        processor.process_score_file("missing.txt")
```

Main.py

```
main.py > ...  
1  from score_processor import ScoreProcessor  
2  
3  processor = ScoreProcessor()  
4  
5  result = processor.process_score_file("score.txt")  
6  
7  print("Final Result:", result)
```

Output-

```
C:\Users\VITU\OneDrive\Desktop\c>python -u "c:\Users\VITU\OneDrive\Desktop\c\main.py"  
Data processed successfully  
File cleanup completed  
Final Result: 70  
  
C:\Users\VITU\OneDrive\Desktop\c>
```
